The final exam is **Thursday May 2 at 1 p.m. in AD 2.232**. The exam has two parts: slide identification and short essays. **NO BLUE BOOKS ARE NECESSARY**. Your notebooks are due **in my office ATC 2.704** **May 2 by no later than 3:00 pm.**

Pop Architecture, or the Neo-Avant-garde in Architecture:  
Ant Farm, Archigram and Superstudio

HISTORIC AVANT-GARDE 1905-1935

NEO-AVANT-GARDE 1955-1975

# ANT FARM

Ant Farm was an avant-garde/neo-avant-garde architecture, graphic arts, and environmental design practice, founded in San Francisco in 1968 by Chip Lord, Doug Michels, Hudson Marquez and Curtis Schreier

Clean Air Pod, 1970, performance at lower Sproul Plaza, University of California, Berkeley

Ant Farm[1968-1978] = Chip Lord, Hudson Marquez, and Doug Michels

Ant Farm, Inflatables – Clean  
Air Pod, 1970-1971

Ant Farm, 50 x 50' Pillow (1970), installation at Saline Valley, California for Whole Earth Catalog Supplement

# TRUCKSTOP

## Truckstop NETWORK

Ant Farm responded to nomadic truckitecture and our own love of mobility in two ways: the design of Truckstop Network, a service matrix for nomads; and by styling our own form of nomad living in the Media Van.

The program we wrote for Truckstop was the research and design for a system of services for people who live in easily movable house/trucks. Truckstop was supported by a small grant from a private foundation in Texas, The Zero Foundation, and was intended to be presented as a show on nomadics at the Corcoran Gallery in Washington which acted as a conduit for funding. In the end the Corcoran backed out, but Truckstop was designed with a mind to detail of imagery. The plan was for a "city" of services that would be physically fragmented with many neighborhoods in different parts of the country and Canada. To retain a sense of community throughout the system, there were common institutions and direct communication links via

television and a central computer. If a person worked for the community, say as a maintenance man or gardener, he would receive "energy credits" redeemable at any Truckstop. Access to the computer would tell him what services were unique to other Truckstops (a complete wood-working shop at the Swannee center, for instance) and what social activities and services were available (astrology classes at Heron; day care at Topeka). This citizen of Truckstop Network could move about freely within the system, taking advantage of regional factors, and since he carries his home with him he needs a minimum of services.

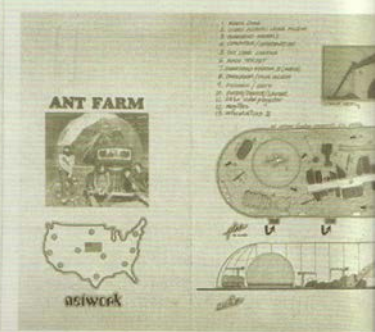

The architecture of Truckstop would be by necessity minimal and subject to transformation. Nomads have traditionally left little in the way of architectural heritage, so we envisioned an inventory of inflatable structures that would serve short-term life and flexibles uses. Each Truckstop would have a grid of services: electricity, cable TV, gas, water, sewage, etc. This grid and a few small permanent domes comprised all the architecture. After all, the truckitect has his home and needs little more.

THE HOUSE OF THE CENTURY		
1972		2072
A Home - Concept - Realization For Martin & Alvin Lubethin		
Designed & Built By		ANT FARM
RICHARD JOYNT		San Francisco, California
CHARLES LORD, JR.		
DOUG MICHELS		NATIONWIDE BUILDERS
		Memphis, Tennessee

4-2MAR-0

The House of the Century is a land based future concept residence for Martin and Alvin Lubethin designed by Ant Farm and built by Nationwide Fasttrack Builders in 1972. Fantasy design images were not lost sight of in this full scale realized work. The house was designed incorporating such diverse influences as post war automotive styling and biological life forms.

# ARCHIGRAM

Based at the Architectural Association, London, Archigram comprised of six founding members. They came from various regions of England and studied at various institutions. These men, Warren Chalk, Peter Cook, Dennis Crompton, David Greene, Ron Herron and Michael Webb possessed different interests and different strengths and abilities. Nevertheless, they shared a visionary spirit and produced many similarly creative independent projects as well as collaborated on many larger avant-garde schemes.

Peter Cook (Archigram)"Instant City, Before IC", 1969

Left: Archigram #1, 1961

Right: Poster for Archigram, Living City, Conceptual Architecture and Exhibition, 1963

Archigram was neofuturist, anti-heroic, pro-consumerist and technophilic. The Archigram magazine was published by the group from 1961 to 1974. There were nine issues in total.

# ARCHIGRAM

THE TRUE STORY TOLD BY PETER COOK

REYNER BANHAM WAS THE FIRST SERIOUS PERSON TO NOTICE US AND TALKED ABOUT THE WORK OF THE ARCHIGRAM GROUP

Funnily enough, we ourselves didn't call ourselves that name but more and more other people did...so one day we said 'what the hell'...and made a letterhead with 'ARCHIGRAM GROUP' on it...and there we were....

ARCHIGRAM 4 WAS THE FLAG FOR WHAT BECAME

AMAZING ARCHIGRAM 4

A HIGH PERIOD OF... NOT ONLY SLOGANS BUT...

SCHEMES

SOMETIMES INDIVIDUAL SOME TIMES WHOLELY BY THE WAY

THAT'S WHAT ARCHIGRAM HAS ALWAYS BEEN ABOUT

# ARCHI GRAM

**ANYTHING-IS-POSSIBLE**

**IT'S ALL THE SAME**

YOU CAN ROLL OUT STEEL - ANY LENGTH  
YOU CAN BLOW UP A BALLOON - ANY SIZE  
YOU CAN MOLD PLASTIC - ANY SHAPE  
EVEN THAT BUILT THE FORTH BRIDGE  
THAT DIDN'T WORRY! \*

This breezy approach to architecture and design typifies the anything-is-possible spirit of the six young architects who came together in London in the early 1960s to form Archigram: Warren Chalk, Peter Cook, Dennis Crompton, David Greene, Ron Herron and Alan Watts. wary of what Peter Cook described as the continuing European tradition of well-mannered but gutless architecture and frustrated by the way in which so-called 'modern' architecture seemed to have betrayed the bravest of modernism's philosophies, Archigram set out to stir architecture from its slumbers, inject it with new vitality and dramatically expand its horizons.

Responding to comic books and the Beatles, space travel and moon landings, new technology and science fiction, the group embraced the technological advances of the 1960s and early 1970s with unabashed optimism. Archigram drew inspiration from determined experimenters in the fields of art, architecture and engineering, celebrating and expanding the ideas of such pioneers as Frederick Kiesler, Barney Baskin, Buckminster Fuller and Cedric Price. Urging architects to remember that "when you are looking for a solution to what you have been told is an architectural problem - the solution may not be a building", the group broadcast its ideas through its own magazine, teaching, exhibitions, multimedia installations and countless collages and drawings.

**NEW ARCHITECTURE FROM ITS SLUMBERS, INJECT IT WITH NEW VITALITY AND DRAMATICALLY EXPAND ITS HORIZONS**

The determination of Chalk, Cook, Crompton, Greene, Herron and Webb that architecture should break out of its narrow-minded, self-referential confines and look beyond ponderous buildings which "just get in the way" has ensured that the maverick Archigram made during the 1960s and early 1970s still reverberates today - not just in architectural circles, but in the wider world of popular culture which its members so enthusiastically embraced.

Poster for Archigram,  
Living City, Conceptual  
Architecture and  
Exhibition, 1963

Existentialism had been a select mode of thought in continental Europe between the world wars, and became more widespread among the postwar intelligentsia. It was slower to take root in a Britain dominated by homegrown empiricism (which was visible, not least, through translation into matter-of-fact welfare state architecture). "Living City" showed existentialism's belated, impressionistic assimilation by the British avant-garde, the exhibition's themed sections ("gloops") amorously and uncertainly combining into a psychic exploration of urban life. "Living City" took the visitor on a sort of existential trip through the city. Our lives in the city are not merely a mass of unconnected chance occurrences, a stroll around the seven gloops of "Living City" implied. They are instead journeys, series of seemingly shapeless and chaotic "situations" that we willfully negotiate and mold to our own requirements in the effort to define ourselves.

-- Simon Sadler

Trace on a postcard Adam Strange, Superman and Alanna of the planet Rann. (If you do this you will not spoil the magazine.) Colour with your paints or crayons and insert the base of each figure in a slit made in the top of three small corks. Push a pin through the centre of the 'dice' for spinning. The one to spin a six first starts the game.

2.16 Ben Fether, game from "Man" *gloop*, "Living City," 1963. A natural existentialist, the Living Citizen progresses through the city move by move, matching her or his inner powers to the game of life.

Peter Cook of Archigram, Plugin  
City, 1964

Committed to a 'high tech', light weight, infra-structural approach that was focused towards survival technology, the group experimented with modular technology, mobility through the environment, space capsules and mass-consumer imagery.

- 1 residential units 2 escalator tubes 3 shop supply tubes & silos 4 shop units 5 compound unit shops  
6 fast monorail 7 local monorail 8 crane 9 heavy duty railway 10 maximum circulation area  
11 fast road 12 local feeder road 13 local parking 14 local goods sorting 15 environment seal balloon

- The Megastructure is an architectural concept popularized in the 1960s where a city could be encased in a single building, or a relatively small number of buildings interconnected.
- Such arcology concepts are popular in science fiction.
- Arcology, a portmanteau of the words "architecture" and "ecology", is a set of architectural design principles aimed toward the design of enormous habitats (hyperstructures) of extremely high human population density.
- These largely hypothetical structures would contain a variety of residential, commercial, and agricultural facilities and minimize individual human environmental impact.
- They are often portrayed as self-contained or economically self-sufficient.

# SUPERSTUDIO

Superstudio was founded by Adolfo Natalini and Cristiano Toraldo di Francia in 1966 Florence Italy -- later joined by G. Piero Frassinelli, Alessandro and Roberto Magris, Alessandro Poli

Superstudio, Continuous Monument, On the Rocky Coast, 1969

Superstudio had three categories of future research: 1.) architecture of the monument; 2.) architecture of the image; 3.) technomorphic architecture

Superstudio imagined the planet with no architecture at all, just “Supersurface,” a network of energy that would replace objects and buildings with a grid — an essential theme in their projects — which people could access by simply plugging in.

DUCK

In essence, “ducks” are buildings that explicitly represent their function through their shape and construction. This typology is defined in opposition to “decorated sheds,” which are generic structures with added signs and decor that denote their purpose (think: big-box casinos, roadside hotels or restaurants with big signs).

Robert Venturi: "Signs of Life," Renwick Gallery, Washington D.C. 1976

It is in the realm of architecture, however, that modifications in aesthetic production are most dramatically visible, and that their theoretical problems have been most centrally raised and articulated; it was indeed from architectural debates that my own conception of postmodernism – as it will be outlined in the following pages – initially began to emerge. More decisively than in the other arts or media, postmodernist positions in architecture have been inseparable from an implacable critique of architectural high modernism and of Frank Lloyd Wright or the so-called international style (Le Corbusier, Mies, etc), where formal criticism and analysis (of the high-modernist transformation of the building into a virtual sculpture, or monumental “duck,” as Robert Venturi puts it), are at one with reconsiderations on the level of urbanism and of the aesthetic institution. High modernism is thus credited with the destruction of the fabric of the traditional city and its older neighbourhood culture (by way of the radical disjunction of the new Utopian high-modernist building from its surrounding context), while the prophetic elitism and authoritarianism of the modern movement are remorselessly identified in the imperious gesture of the charismatic Master.

Postmodernism in architecture will then logically enough stage itself as a kind of aesthetic populism, as the very title of Venturi’s influential manifesto, *Learning from Las Vegas*, suggests. However we may ultimately wish to evaluate this populist rhetoric, it has at least the merit of drawing our attention to one fundamental feature of all the postmodernisms enumerated above: namely, the effacement in them of the older (essentially high-modernist) frontier between high culture and so-called mass or commercial culture, and the emergence of new kinds of texts infused with the forms, categories, and contents of that very culture industry so passionately denounced by all the ideologues of the modern, from Leavis and the American New Criticism all the way to Adorno and the Frankfurt School. The postmodernisms have, in fact, been fascinated precisely by this whole “degraded” landscape of schlock and kitsch, of TV series and Reader’s Digest culture, of advertising and motels, of the late show and the grade-B Hollywood film, of so-called paraliterature, with its airport paperback categories of the gothic and the romance, the popular biography, the murder mystery, and the science fiction or fantasy novel: materials they no longer simply “quote” as a Joyce or a Mahler might have done, but incorporate into their very substance.

EISENMAN  
GRAVES  
GWATHMEY  
HEJDUK  
MEIER

Five Architects, originally published in 1975, grew out of a meeting of the CASE group (Conference of Architects for the Study of the Environment) held at the Museum of Modern Art in 1969. The purpose of this gathering was to exhibit and criticize the work of five architects—Eisenman, Graves, Gwathmey, Hejduk, and Meier—who constituted a New York school, and who are now among the most influential architects working today.

Five Architects  
The “Whites”

Colin Rowe (1920-1999)

physique-flesh  
morale-word

“As Colin Rowe has put it, in America after the war, a commitment to the modern entailed a decision : should the architect adhere to the physique-flesh or to the *morale*-word of modern architecture? Mainstream practice chooses the *physique*-flesh; the neo-avant-garde signaled its distance by foregrounding theory.”
